The Artesyn Embedded Technologies MVME2502 is a VME form factor single-board computer based on the very popular NXP QorIQ P2020 dual core processor which features e500 cores delivering an excellent performance-to-power ratio. Compared to the other MVME2500 variants in the series, MVME2502 offers dual PMC/XMC sites whereas MVME2500 provides a single site solution. In addition it offers a range of front panel I/O including serial, USB 2.0, and Gigabit Ethernet plus a rear transition module with two Gigabit Ethernet, four RS-232 serial and a PMC Interface Module site. The MVME2502 comes standard with 2GB of soldered down DDR3-800 ECC DRAM, 8GB eMMC module and has a SATA connector for an optional 2.5" SATA SSD/HDD. Other features include dual flash banks, 3 independent tick timers, and on board 512K MRAM.

MVME2502 is designed to work in legacy VMEbus chassis with a 3-row backplane connector environment with a reduced I/O capacity and reduced peripheral power budget. It is also designed to work in a more modern and higher performance VME chassis environment with a five-row backplane connector in the 2eVME or the 2eSST protocol mode.

With such a wide range of I/O options, MVME2502 is designed for applications such as industrial control, semiconductor process equipment, radar, sonar and transportation signalling. It is available in commercial and rugged, extended temperature options which make it suitable for a wider range of environments.

Transition Modules

The MVME7216E transition module provides industry standard connector access to two 10/100/1000BaseTX ports, and four asynchronous serial ports configured as RS-232 DTE. All of these are via RJ-45 connectors. The MVME7216E RTM is designed to directly connect to the VME backplane in chassis with an 80 mm deep rear transition area. This transition module is compatible with the MVME3100, MVME4100 and MVME7100 boards.

Software Support

FIRMWARE MONITOR

The MVME2502 uses U-Boot firmware which is resident in the MVME2502 flash and provides power-on self-test, initialization and operating system booting capabilities. It is based on the 2013.01 patched U-Boot provided by NXP.

OPERATING SYSTEMS AND KERNELS

The MVME2502 supports a variety of operating systems with associated Board Support Packages (BSPs): Fedora 13 Linux (2.6.27 kernel), VxWorks (6.9 SMP) and Linux kernels from Green Hills and LynuxWorks (upon customer request).
