Remote Sense

Each output has remote sense connections which can compensate for up to 0.5V drop. It is recommended that a shielded twisted pair wire is used. It is not necessary to use remote sense, the power supply will revert to its own internal sense, so no connection is necessary to use the supply. The best voltage regulation is obtained with remote sense connected.

J1-1 +Remote Sense V1
J1-4 -Remote Sense V1

J1-9 +Remote Sense V2
J1-10 -Remote Sense V2

Remote Margining, Single Output Modules

On each output it is possible to switch the nominal output voltage up and down by 5% by connecting Remote Margin to Margin Hi or Margin Lo. This is useful for checking voltage tolerance limits on equipment powered by this supply. When the output voltage is adjusted via the front panel pot. the margining will track it to still give $\pm 5\%$ around the nominal set voltage.

Module Isolated Inhibit

Output is "ON" with low or open
Can be used for external output sequencing in multi-output units.

Single Wire Parallel

J1-8 ———— V1

Singles or main of dual output. Can also be used as a relative current monitor using proportional voltage: 2-6V, high impedance, do not load this pin, use buffer. When individual unit outputs are in parallel the SWP's lines are tied together. This provides forced current sharing of the outputs.

Special Application Notes For Dual Output Modules

An OVP condition on V2 will "latch" off the entire module. Recycle the AC input to reset. V1 is main output forward converter V2 is Sub regulated current mode magamp output.
